2022 Metaverse Trends: More NFTs Games And New Virtual Experiences

Original:

<https://www.btcc.com/en-US/academy/research-analysis/2022-metaverse-trends-more-nfts-games-and-new-virtual-experiences>

Key Takeaways

- *“While gaming is the biggest example of the metaverse in the crypto sector, we are still in the early stages of blockchain gaming.”*
- *One of the most notable trends may be the rise of virtual experiences, whether in the form of online video or event streaming, or in the form of virtual reality.*
- *As with gaming in the metaverse, this should witness a significant use of NFTs.*

While “non-fungible token” ([NFT](#)) may be a Collins dictionary word for 2021, it’s likely that “metaverse” will be a close second (Collins did mention the term in his blog in honor of NFT). Because ever since Facebook changed its company name to Meta and announced a new focus on developing its own metaverse, the word has been on the lips of almost anyone vaguely interested in new technology.

While it’s yet to be determined just how profitable Facebook’s pivot to [the metaverse](#) will be for the social media giant, it has already been highly lucrative for a number of blockchain-based platforms that have been able to get a headstart on the Menlo Park-based corporation. From the Sandbox (SAND) and Decentraland (MANA) to Axie Infinity (AXS), and DeFi Kingdoms, numerous metaverse projects have witnessed their native tokens reaching all-time highs in 2021.

And for several metaverse figures speaking with *Cryptonews*, the blockchain-based metaverse will continue to grow healthily in 2022, even with growing competition from non-crypto firms. And while they expect gaming to remain the biggest part of the metaverse sector, they also see the growth of NFTs, virtual experiences, and decentralized communities as being a defining feature of 2022.

Blockchain-based Games Will Remain the Biggest Metaverse Trend in 2022

If you look at the top three ‘metaverse’ tokens by market capitalization, you’ll see that they are all gaming-related. This is Axie Infinity, the Sandbox, and Decentraland, and for most figures operating within the [crypto](#) industry and the metaverse sector in particular, gaming will continue to be the dominant trend.

“The leaders so far (Axie, Splinterlands, etc.) have done well enough to convince significant new capital to flow in — pretty much any blockchain/metaverse game is getting funded no questions asked at this point, so there will be no shortage of new games to market in the coming years. Gaming also seems to have found a product-market fit whereas other metaverse use cases are still a bit more speculative, still trying to figure out their business model and path to adoption,” said Wes Levitt, Head of Strategy at decentralized video delivery network Theta ([THETA](#)).

Speaking of Axie Infinity, Aleksander Larsen, the Chief Operating Officer of its developer, Sky Mavis, estimates we’ll see more — and better — metaverse games launched in 2022.

“While gaming is the biggest example of the ‘metaverse’ in the crypto sector, we are still in the early stages of blockchain gaming. This year we will continue to see NFTs grow and eventually become mainstream,” he told Cryptonews.

For Maksim Balashevich, the CEO and founder of crypto market analysis firm Santiment, gaming will “definitely” remain the biggest trend within the metaverse sub-sector in 2022.

According to him, the topics will change (or rotate), but the trend towards ‘internet of digital values, creation and owning’ will keep evolving.”

As an indication of just how large the gaming-based metaverse already is (and could become in 2022), the Blockchain Game Alliance’s annual report found that NFT-based games (which mostly involve some form of metaverse) generated USD 2.32bn in revenue. Given that the metaverse didn’t really pick up until the beginning of November (Facebook officially changed its name to Meta on October 28), this would suggest that 2022 might be even bigger for blockchain-based games and their metaverses.

Other Metaverse Trends in 2022

While they are likely to be overshadowed in 2022, other metaverse trends should also gain increasing traction in the New Year.

One of the most notable might be the rise of virtual experiences, be this in the form of online streaming of videos or events, or in the form of virtual reality. As with gaming in the metaverse, this should witness considerable use of NFTs.

“Personally, I’m excited to see NFTs as access passes for various experiences both [in real life] and online. Imagine a model in which creators make content that can only be accessed by fans that own a specific NFT, which will have greater utility and more value for owners,” said Aleksander Larsen.

Larsen adds that, eventually, we’ll see the emergence of gated social networks based on what NFTs people have in their wallets, thereby providing users with a more tailored social experience.

Wes Levitt is another industry figure who estimates that online, video-based experiences will grow in prominence this year.

“Standard video use cases will grow as people discover shared experiences in the metaverse centered around video – attending movie premieres, watching concerts/festivals, and other social experiences that can be recreated in the metaverse. At Theta we’re building tools to support this sector with our Theta Video API, NFT ticketing for online events with our ThetaPass product, and others we think will help facilitate video in the metaverse,” he said.

Levitt also notes one more distant trend within the metaverse, one which the whole sector is probably working towards in one way or another.

“[Virtual reality (VR)/augmented reality (AR)] is probably the end goal, as the hardware gets cheaper and [user experience] gets better, that will be the really transformative way to access the metaverse. That is still emerging though and won’t hit its stride for a few years,” he added.

The idea of a fully realized VR-based metaverse is an exciting prospect, but what’s also exciting for Maksim Balashevich is that the sector is likely to give birth to many other trends and areas over the coming years. This is largely because, being driven from the ground-up by their communities, metaverse platforms are likely to be dynamic.

“Everywhere where one can create and own the results of his/her (and community around) effort, will eventually be big,” he said.

Other Non-crypto Metaverses

Given the entry of Facebook/Meta into the metaverse arena, 2022 is likely to bring more mainstream companies looking to jump on the bandwagon. However, figures working within crypto say they won’t stand much of a chance if they don’t use blockchain and/or crypto in some shape or form.

“Ultimately, [blockchain technology](#) and crypto technology will flip the technology industry on its head by holding companies more accountable, and enabling true digital ownership. The companies that are going to be the most successful in this space are the ones that are genuine and want to change things for their users and not just jump on the bandwagon,” said Aleksander Larsen.

Larsen also added that Sky Mavis isn’t worried about non-crypto companies entering the space for the reason that apps like Axie Infinity could surpass anything that companies like Meta can offer.

“Axie Infinity is way more than a game, but a community-led digital nation with a real economy that’s having a major impact on lives everywhere. We’ve been able to onboard millions of people into crypto through a fun, accessible, and nostalgic experience, and [I] believe it’s just the beginning of a tidal wave that will sweep the world,” he said.

Maksim Balashevich is similarly bullish, although he acknowledged that many companies “will surely try” to participate in the metaverse.

However, he concluded, “But I doubt they have a big chance long term. The future is [peer-

to-peer] and community-owned, not corporation owned.”
