What are Circuits of Value (COVAL)?

Using the [Ethereum](#) blockchain, COVAL is a decentralized coin that gives users prizes just for being a part of the network. COVAL's staking scheme is the first of its kind, allowing users to gain incentives just by being active on the network.

COVAL's goal from the start has been to offer its consumers a rewards system that is both fair and long-lasting. Members of the COVAL team have extensive expertise working on blockchain projects and have contributed to the development of Ethereum, EOS, and others. On December 18, 2017, COVAL was released.

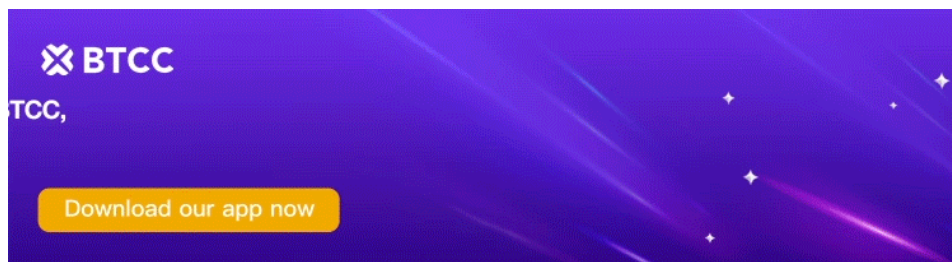

The cryptocurrency COVAL first appeared on the market in 2015. It borrows several ideas from the [Bitcoin](#) protocol but tweaks them somewhat. When comparing COVAL to Bitcoin, the following are the most important distinctions:

In contrast to Bitcoin's ten minutes, COVAL's block time is under 2.5 minutes. This results in the COVAL network confirming transactions more quickly. COVAL's total quantity of 21 million coins is lower than Bitcoin's total supply of 21 million coins.

In contrast to Bitcoin's SHA-256 algorithm, COVAL's mining algorithm, Scrypt-n, is built to be more resistant to ASICs. This opens up the possibility of COVAL mining to a larger audience by allowing it to be done with standard CPUs and GPUs.

COVAL aspires to be a more approachable and user-friendly substitute for Bitcoin. This objective has been met thus far by the project. The COVAL team is hard at work making the coin even more intuitive and enhancing its existing features.

Circuits of Value (COVAL) Price History

Loyyal unveiled their bold strategy to enable legacy projects with instantaneous access to the Loyyal network in an exciting announcement about RibbitRewards on July 11, 2016. A new brand and logo, “Coval,” were born out of a contest that was launched to commemorate this landmark.

With an initial price of \$0.0036, CoinMarketCap officially listed Coval in January 2015. The value of Coval, however, increased by a whopping 260%, hitting \$0.07, on December 6, 2021, the day it was finally listed on Coinbase. Coval reached its pinnacle of prosperity on January 19, 2022, when it hit a record high price of \$133.01—an incredible increase in value from its low starting point.

The value of Coval has fallen dramatically, shedding 99% of its value since it reached its ATH of \$133.01 on January 19, 2022. But in a start-up sale on Gate.io on February 21, 2022, with tokens selling for \$0.061025 apiece, Coval raised an astounding \$63 million.

Coval was experiencing difficult market conditions and a bear run in 2022, which led to a decline in its price. Nevertheless, the token’s value reached \$0.02668 during a short bull run in February 2023. Despite this short-lived uptick, the token price has fallen substantially, falling 67.69% from its value earlier in 2023.

The cryptocurrency is anticipated to have tremendous price appreciation in the future as a result of its safe ecology.
