Crypto.com is a well-known digital currency exchange that accepts a wide variety of [cryptocurrencies](#) and other [blockchain](#)-related items. A wide variety of currencies are available for buying, selling, and trading, and the trading fees are competitive. Additionally, the company offers [cryptocurrency](#) credit cards, a decentralized exchange, a standalone crypto wallet, and an NFT marketplace. Staking your [cryptocurrency](#) or leaving it in your Crypto.com wallet for an extended length of time will earn you up to 14.5% interest. Staking cryptocurrency, however, carries the inherent risk of having your funds locked up for an indefinite amount of time.

Crypto.com is a viable option for anyone wishing to acquire and hold digital currencies such as Bitcoin and Ethereum. Trading fees are capped at 0.40% and decline with greater trading volume or larger CRO currency holdings. There are presently 250 supported currencies, multiple order types, and futures trading on Crypto.com.

How does Crypto.com Work?

The original goal of what was to become Crypto.com, formerly known as Monaco Technologies, was to hasten the global adoption of [cryptocurrency](#). What started off as a means of making cryptocurrency payments is now a major hub for the digital currency.

You can access Crypto.com from your computer or mobile device. After signing up and verifying your identity, you'll have access to the exchange, the app, and the DeFi wallet. Sometimes it's hard to tell the app from the exchange. Crypto.com is unique among [cryptocurrency exchanges](#) in that its app and web interfaces are completely independent of one another. The transfer of funds between the two is simple, but the interface is confusing. To get different perks, I had to stake CRO on both platforms, which is inconvenient.

The DeFi wallet is a separate offering. It's a decentralized marketplace for buying and selling digital currency. If you go this way, you'll have complete control over your keys and the option to expedite the swap for a greater charge.

If you stake CRO on either the Crypto.com app or the Crypto.com exchange and leave it alone for more than six months, you can earn interest and unlock advantages.

The Cryptocurrencies You Can Trade With Crypto.com

More than 250 different [currencies](#) are available on Crypto.com for spot trade, while a smaller number are supported for staking. There are too many supported currencies to mention them all, but you can buy and sell the majority of the most actively traded currencies. (Check out all of the property that is for sale.)

Some of the most sought-after assets on the site are:

- Bitcoin (BTC)
- Ethereum (ETH)
- Cardano (ADA)
- Dogecoin (DOGE)
- Polkadot (DOT)

Crypto.com offers its own [cryptocurrency](#), CRO. If you hold a big position in CRO, the firm rewards you with reduced trading fees, better staking interest rates, and higher credit card rewards.

Fees

Trades by new Crypto.com users with no CRO staking and a monthly trading volume of less than \$250,000 will incur a fee of 0.075%. Commissions on trades are lower than those of some of the most prominent competitors in the market, but they are still not the lowest.

Without CRO staking, high-volume traders can get fees as low as 0.05% as a taker or zero as a maker. Discounted trading fees are available when you hold at least 1,000 CRO in your wallet. At that moment, traders with up to \$250,000 in monthly volume pay 0.0728%. A larger wager results in a lower rate.

There are no additional per-trade fees, so Crypto.com is competitive when it comes to pricing.

Is Crypto.com Safe?

When using the Crypto.com platform, your information is safe and secure. As a result, it is equipped

with safety measures to safeguard users' money at all times.

All cryptocurrency on the network is kept offline in secure "cold storage." They also have the ability to incorporate the Ledger Vault, an institutional-grade custody solution, thanks to their cooperation with Ledger.

Crypto.com pursues a safe software development lifecycle wherein its peer-reviewed software combines static and dynamic source code analysis technologies. Password, biometric, phone, email, and authenticator verification are all part of their Multi-Factor Authentication (MFA) system.

To ensure the safety of its Blockchain infrastructure, it employs top security auditing organizations like Kudelski Security. Users should be aware, however, that the organization cannot guarantee their complete safety online because of external factors like hacking.

Further safety features consist of:

- Using key-generation and multi-signature technologies in addition to hardware security modules (MHS)
- Protect your cold storage facility from theft and accidental damage with the right insurance.
- Cold and hot wallets should have stringent controls over who can access cryptocurrency funds.
