

A dark blue banner for BTCC. On the left, the BTCC logo is followed by the text "Enjoy fees as low as 0.03%". Below this, there are four bullet points: "70+ crypto futures", "24/7 customer support", "100,000 USDT for demo trading", "10-150x flexible leverage", and "Support credit card deposits". On the right, there is a graphic of a smartphone displaying various financial charts and icons for Bitcoin, Japanese Yen, and Stellar Lumens. A yellow "Register Now" button is at the bottom right.

BTCC
Enjoy fees as low as 0.03%

- 70+ crypto futures
- 24/7 customer support
- 100,000 USDT for demo trading
- 10-150x flexible leverage
- Support credit card deposits

About Stellar (XLM)

Original:

<https://www.btcc.com/en-US/markets/Stellar>

What Is Stellar Lumens (XLM)?

Stellar Lumens (XLM) is the native cryptocurrency of Stellar, which is a [blockchain](#)-based payment network. As a cross-border transfer and payment system that connects financial entities, Stellar aims to unite the world's financial infrastructure, connecting banks, payment systems, and individuals with near-instant and secure transfers.

If the Internet connected the world's computers to enable the free global flow of information, Stellar aims to do the same for money. To accomplish this vision while maintaining neutrality, Stellar is not set up as a bank or a business. Instead it's a decentralized, open network that is supported by a nonprofit foundation called the Stellar Development Foundation (or SDF, for short).

How XLM Works

XLM (or Lumens) fuels activity on the Stellar network — a system designed to help payments (and currencies) cross borders faster and cheaper than with traditional financial-system networks.

Stellar was intended to work alongside existing assets and [cryptocurrencies](#), allowing users to create digital representations of any asset as a Stellar token. These can then be used to transact on the blockchain, and can be redeemed at any time for the base asset. As an example, a stablecoin pegged to the U.S. dollar, such as USDC, is issued on the Stellar network.

As a decentralized financial network, no single entity can process transactions or stop someone from onboarding or offboarding into Stellar, and the network can still run successfully even if some servers are turned off or fail.

Instead of being mined by "proof of work," Stellar is secured by a unique blockchain mechanism called the Stellar Consensus Protocol (SCP).

Can I Mine or Stake XLM?

Unlike many popular cryptocurrencies, XLM cannot be mined or staked to receive rewards and increase the asset's supply. While Stellar works like technologies like Bitcoin, its key distinguishing feature is its consensus protocol. The present-day Stellar is a result of a 2014 fork that created the

Stellar Consensus Protocol (SCP) following which Stellar became an open-source system. Under this protocol, the transaction authentication process is confined to a select set of trustworthy nodes rather than being left open to the whole network of nodes.
